Consider This: Youth in Debt (Part 2)— 53,000 Youths Seeking Help To Manage Debt

The Credit Counseling and Management Agency (Agensi Kaunseling dan Pengurusan Kredit, AKPK) recently reported that 65% of the total number of the agency's clients as of March were those aged between 28 and 30. That's some 53,000 youths seeking AKPK's services to restructure their debts, worth nearly RM1.9 billion in total. What are the implications of this staggering statistic, and what systemic factors are contributing to the financial struggles faced by young Malaysians today? On this episode of #ConsiderThis Melisa Idris speaks to Nirmala Supramaniam, Head of the Household Financial Education Department at AKPK, an agency under Bank Negara which helps individuals with the responsible use of credit.

13/05/2024 20:00 MYT

for instance. According to BNM's Financial Stability Review Second Half 2022, four major non-bank BNPL players control 96 percent of the total BNPL transaction values. According to the same report, 44 percent of BNPL users are between the ages of 18 and 30. It is a matter of concern that the proportion of BNPL users with overdue payments is also increasing, from 7 percent in the fourth quarter of 2021 to 14 percent in the second quarter of 2022, and finally to 17 percent in the fourth quarter of 2022.

**Impulsive online
spending!**

Problem Exploration

Instant Gratification

Late night impulse buying (Shopee, Grab Food)

Saving is Lonely

Existing finance apps (saving money alone) lack motivation and engagement

Zero Consequences

Impulse buying has no immediate penalty, causing saving goals to be delayed

Our Solution - SamaSave

Integrated into GXBank

Transforming Banking into a Social Habit-Builder

Our Core Strategy

```
graph LR; A[Our Core Strategy] --> B[Active Intervention]; A --> C[Social Accountability];
```

Active Intervention

Intercepting impulsive spending before it happens using AI-driven friction and behavioural nudges

Social Accountability

Turning financial discipline into a multiplayer experience. If you slip up, your friends know—and your partner profits

SamaSave Pocket

1

Create & Customize

Set a goal amount, select a category (Trip, Concert, Shopping), and define the exact "Usable Period" (Start/End Date).

2

Frictionless Invites Customize

No complex setups. Share the auto-generated invitation code (e.g., SAMA-OSAKA-26) to invite your friends to join the SamaSave Pocket instantly.

3

Shared Vision

Individual Goals Everyone saves in the same shared space to keep each other motivated, but your money remains your own to crush your specific target.

Fair Play Protection: Solo pockets auto-close and refund within 24 hours if no friends join, preventing users from exploiting the #1 rank interest reward

AI Sensitivity Mode

Personalized Protection Tiers:

Gentle

Friendly AI
Reminder

Strict

Applies a 3% Penalty. The penalty isn't just deducted—it's transferred directly to your Accountability Partner!

Devil

Applies an 8% Penalty AND publicly roasts your impulsive purchase in the Savage Activity Feed. Supreme social shaming!

Impulse Risk Matrix

How our hybrid AI engine calculates real-time spending behaviour —user-selected AI mode determines the Resilience Tax

Time Risk +25 pts

Late-night purchases (10PM–5AM) flagged as "Midnight Craving" zone

Category Risk +20 pts

Shopee, Lazada, food delivery, gaming, TikTok Shop — high impulse categories

Impulse Score: intercept triggered at >= 75

Frequency Risk +25 pts

3+ transactions in one day signals repetitive impulsive behaviour

Goal Conflict +25 pts

Spending when savings goal progress is below 70% triggers penalty

GENTLE

0% TAX

Friendly AI reminder only – no penalty deducted, no transfer

STRICT

3% TAX

3% Resilience Tax deducted and transferred to Accountability Partner

Financial Pressure +25 pts

Balance under RM100 + active spending = high-risk financial behaviour

Override History +20 pts

Repeated AI warning overrides within 24h multiplies discipline score

DEVIL

8% TAX

8% Resilience Tax + purchase/transaction publicly roasted on Savage Activity Feed

LIVE API

[POST /api/v1/check-transaction](#)

FORMULA

score = time_risk + category_risk + frequency + goal_conflict + balance_pressure + override_history

Accountability Partner System

To make financial penalties feel real but fair, SamaSave introduces the **Accountability Partner mechanism**.

When an impulse purchase is made under Strict or Devil Mode, the **3% - 8% Resilience Tax** is deducted and **transferred directly to the linked partner**.

This creates a gamified **peer-to-peer accountability loop** where your lack of discipline literally pays for your friend's coffee!

The Weekly Incentive

Gamified Financial Growth

- SamaSave Pockets: Collaborative savings spaces for shared financial goals such as KL Trip Fund.

+0.5%

Interest Booster

Reward granted to Rank #1 savers every Monday at 00:00. Capped at RM 5.00/week to maintain sustainable unit economics.

Reward is based on new weekly deposits, not total balance. This ensures fair competition for all.

Anti-Gaming "Solo Pocket" Mechanism

Why this rule?

Prevent solo users from gaming the leaderboard to farm the weekly Rank #1 interest booster with no real competition.

24-hour deadline

A strict invite window enforces real social commitment. Reminders are sent at 12h and 22h mark to prompt action.

Auto close & refund

If unmatched, the pocket closes automatically and all funds are returned safely to the main account. No penalties.

Savage Activity Feed

- A live social feed that transforms saving into a visible and interactive experience.

Example:

- "Look everyone! Zini just made an impulse purchase! 🔥"
- "Zini saved RM150 for the Osaka Universal Studio! 📈"

Instead of making saving a private activity, SamaSave uses social visibility to encourage:

- Positive peer influence
- Financial accountability
- Consistent saving habits
- Community-driven motivation

Seamless Spending (GX Card Integration)

Don't just save smarter; spend smarter. Link your savings directly to your physical card.

Dedicated Pocket Linking

- Users can link any active pocket as the default payment source for their physical GX Card

Main Account Protection

- Swipe your card on holiday and funds deduct from your "Trip Pocket" — your everyday main account stays completely untouched.

Frictionless Experience

- No manual transfers needed before you spend. Save with purpose, spend with ease — exactly when and where you need it.

GX Card integrated

What happens when a goal is reached?

**We don't just stop –
we build long-term wealth.**

THE POCKET LIFECYCLE ↓

The Pocket Lifecycle

When a pocket reaches its end date, the squad celebrates, and the pocket securely closes.

Cash Out

Transfer to Main Account for immediate use.

Keep the Streak

Transfer funds to another active pocket to crush your next financial goal.

Grow Wealth

Reinvest into GX Bonus Pocket to earn high interest (up to 3.55% p.a.).

Behavioural Impact

We prevent "post-goal spending binges" by giving users an immediate, rewarding next step. Short-term saving habits are converted into long-term financial resilience.

Behavioural Economics Engine

Principle	Implementation in SamaSave
Loss Aversion	3% to 8% penalties transfer your money to your friends, triggering severe aversion to impulsive spend
Social Proof	The Savage Activity Feed creates positive peer pressure to save
Spending Friction	AI interventions slow down emotional purchase decisions
Gamification	Weekly leagues and resets drive high active usage

Target Audience

Gen Z

University Student

Fresh Graduates

Commercial Potential

Zero-Cost Customer Aquisition

Users must invite friends to unlock the Weekly Leaderboard rewards

Customer Retention

- High Weekly Active Usage (WAU) driven by the Monday leaderboard resets, paired with sustainable reward economics (capped interest boosts)
- Creates Daily Active Users (DAU) who check the app for social feeds

Technology & System Approach

Component-Based Architecture

Built using a Micro-Frontend approach. Instead of a standalone app, SamaSave acts as an independent React-based module that injects directly into GXBank's existing UI, ensuring zero compatibility issues

Event-Driven Architecture (Pub/Sub)

Uses an Event-Driven Architecture (Pub/Sub). When a user makes an impulse purchase, it triggers real-time events to instantly update the Savage Activity Feed and Leaderboards without lagging the main bank servers.

AI Engine: Google Vertex AI Integration

Uses Google Cloud's Vertex AI and Gemini to analyze spending habits in real time. It quickly detects impulse purchases to trigger the Gentle, Strict, or Devil accountability modes.

Core Ledger API Integration

Connects directly to GXBank's internal core ledger API. This allows SamaSave to instantly deduct penalties and move money between pockets using the bank's existing, PCI-compliant infrastructure.
